PACKAGING LINE PROCESS

1. Emptying and treatment conveyor belt.

Conveyor for emptying boxes or pallets with manual selection areas.

2. Product elevator.

3. Lineal associative weigher PL14.

Associative weigher with 14 heads. It has 14 vibrating channels with an independent vibration system.

Group of 14 feed hoppers and group of 14 weight hoppers with servo drive. Special hopper design for any size of fruit.

It is designed for delicate fruits and incorporates the “shock absorber” padding system developed by INDUSER throughout its entire journey.

4. Tray denester.

5. Chain conveyor belt and filler.

Induser's packaging chain conveyors are known for their speed and versatility. They include a series of accessories to dispense, fills, close and cap a variety of packaging formats.

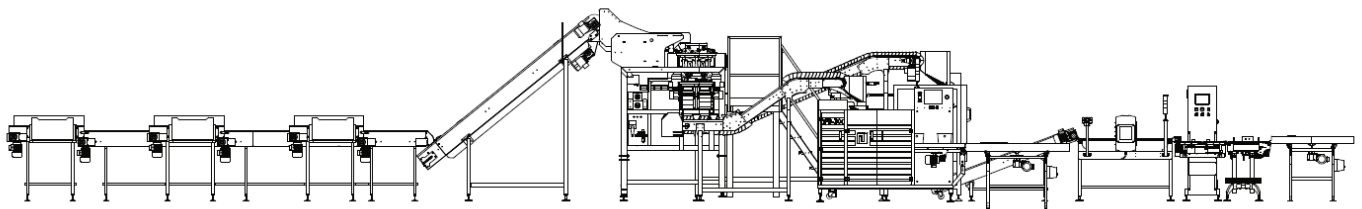

6. Weight Control.

A solution that is integrated at the end of the line. It has been designed for the verification and control of the products that have been packaged.

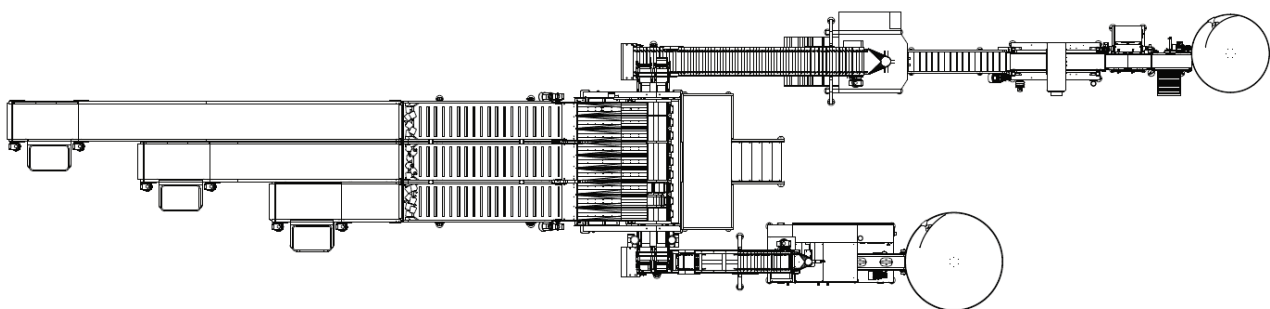

7. Labeller.

Label and counter-label for containers in different formats, using a robust stainless steel chassis. You have the option to include the installation with the printer.
