INGENUITY FOR PACKAGING

PEPPERS COMPLETE PACKAGING LINE

Designing and producing high quality machinery, customized for each client's needs so they can achieve competitive advantages for the future of their businesses.

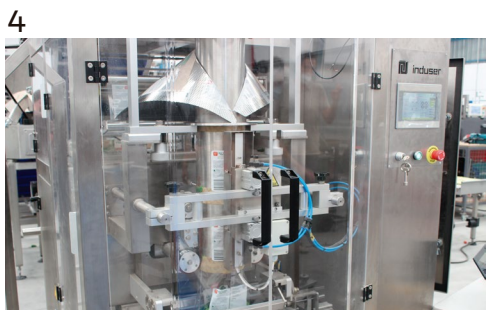

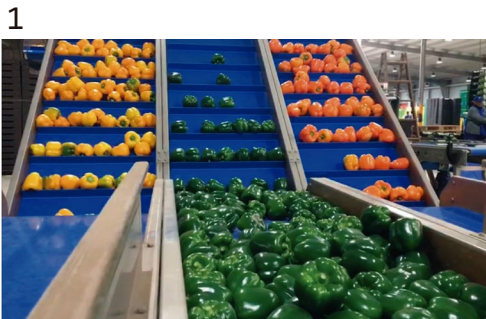

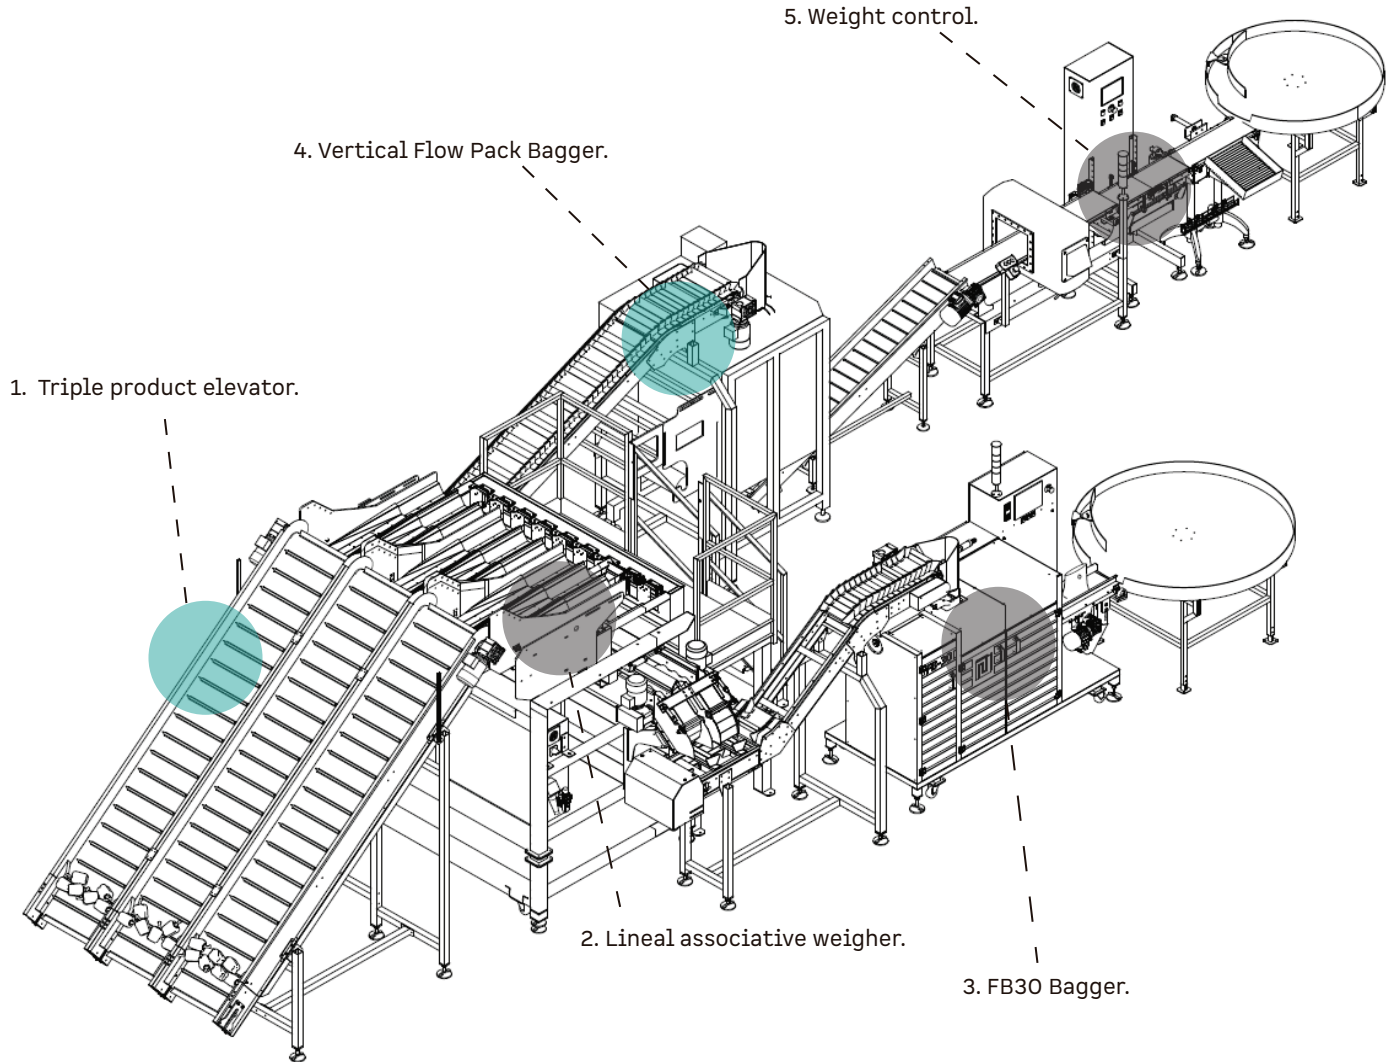

We come from "Europe's orchard".
We are spanish.
We are from Almería.

PEPPERS AND ITS JOURNEY THROUGH OUR ENGINEERING SOLUTION.

All Induser packaging lines are customized according to the needs of each client. Multifomat, adaptability and the delicate treatment of the product, are part of the brand promise we make.

This is the complete journey for peppers through our solution.

Bagged product

COMPLETE PACKAGING LINE PROCESS

1. Triple product elevator.

Before reaching the triple product elevator, the peppers are emptied and selected in a group of three conveyors with emptying hoppers, selection area and product dosing.

2. Lineal associative weigher.

Weighing solution with option of 18 heads, with special software for mixing product by % of color or by number of pieces.

It is ideal for mini-peppers, sweet bite varieties, Mexican chilies or California peppers. The entire surface in contact with the product is refloned and the different distribution and weighing hopper stations are padded with our "shock absorber" surface that avoids impact and provides a delicate treatment to the product, ensuring its quality to its final destination.

3. FB30 Bagger.

Vertical position for "stand up pouches" with the possibility of zipper closure and/or heat sealing.

4. Vertical Flow Pack Bagger.

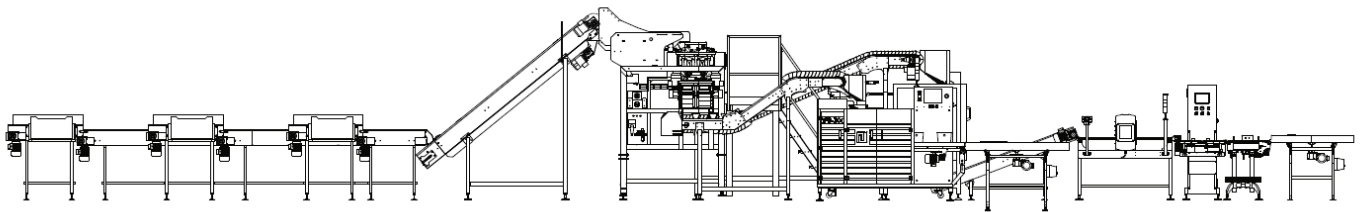

Bag packaging machine for film plastic or paper with longitudinal and transverse sealing. The final finish can be either "pillow-bag" or with a stable bottom.

It allows the detection of macula "tracking mark" for the client's branding and the integration of another machine, a thermal-labeler.

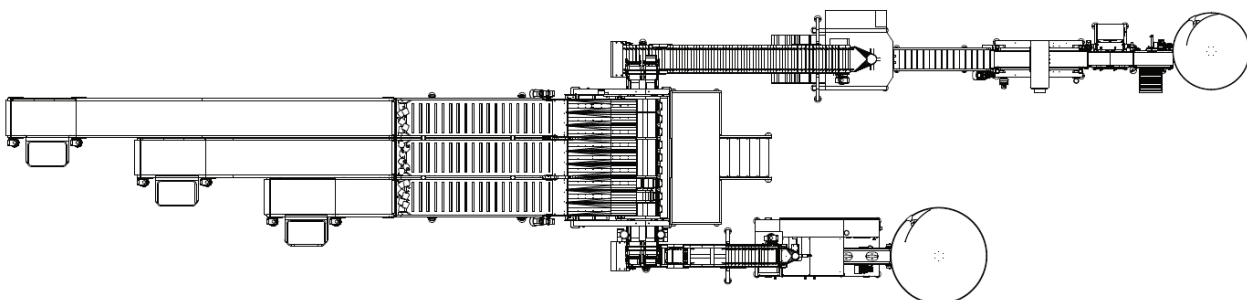

5. Weight control.

This machine can be added at the end of the line. It works by discarding the dynamic weight allowing a final weight control in the product.

DIMENSIONS

19300 mm

4500 mm
